

## **EarthSoft Collaborates with ddms Adding Project Portal™ Capabilities to EQuIS™**

October 27, 2011 – EarthSoft announced today collaboration with ddms, inc. (ddms) to add Project Portal capabilities to EQuIS.

Project Portal™ is a powerful yet intuitive cloud-based internet application developed specifically for use by environmental industry professionals. Project Portal brings together data, documents, GIS, schedules and team members to a common meeting place where users are offered intuitive tools to access and manipulate project data. This approach to project coordination has been proven to significantly increase the speed and reliability that data and documents are distributed and organized for access by authorized personnel. Users can turn to one centralized "web-place" to find all project related documents, the most recent lab EDD results, a list of contact information for everyone related to the project, and any other important project intelligence.

Project Portal Modules Include:

- Document Management - View, download and/or post project documents into Project Portal's secure document management system with notification capabilities. All project documents are backed up nightly.
- Project Calendars - View and post project schedules, meetings and milestone goals on your group Project Calendar.
- Environmental Databases - New Project Portal support for EQuIS database option! Access and analyze historic and current environmental data in EQuIS through Project Portal's environmental data query interface and export to many format options including Google Earth®.
- Geographic Information System - Access the Project Portal GIS to spatially explore the project sites. Users are also able to create their own custom maps which may be exported to Adobe PDF files and shared with others.

EarthSoft provides open, innovative software solutions for managing sample/technical data for laboratories, consultants/engineers, owner/operators, responsible parties and other stakeholders.

EarthSoft's EQuIS is the most widely used environmental data management software system in the world. For more information, visit [www.earthsoft.com](http://www.earthsoft.com) or email [info@earthsoft.com](mailto:info@earthsoft.com).

de maximis Data Management Solutions (ddms) is a service oriented company providing quality environmental data management, visualization, GIS, environmental chemistry and information system services. ddms employs scientists, database developers, certified GIS analysts, programmers and cartographers whom together provide superior data management and application development services. ddms is unique in the marketplace in that it possesses both environmental industry expertise as well as state of the art information technology.
