

EarthSoft Accelerates Development of EQuIS™ Live and Alive Modules

...Announces Multiple Large Contracts...

October 31, 2011 – EarthSoft announced today that its new EQuIS Enterprise Version 6, EQuIS Alive, and EQuIS Live modules will be released in spring 2012.

EarthSoft has received several new large contracts for EQuIS in September and October, including multi-server sales to SGS and Barrick Gold in multiple languages. Other new clients include TransCanada, Brown and Caldwell, Black & Veatch Water, Marcellus Shale Coalition, Nexen Energy, and the US National Park Service.

EarthSoft also announces record revenues for third quarter 2011 with significant growth in both licensed and hosted product lines. License fee revenues increased 79% over 2010 and hosted revenues increased by 51%. As a result of the large amount of new business, EarthSoft is hiring multiple new staff, creating a dedicated QA department for software testing, and is offering significant additional international training services in multiple locations including Asia, Australia, Africa, and Poland.

EQuIS Enterprise Version 6, free to Enterprise clients with current Maintenance, offers a Silverlight client supporting SOAP and REST web services. GIS is further integrated and is a combined application, allowing users to create multiple dashboards that are each URI-accessible. Additionally, multiple dashboards can be opened in multiple browser windows. Different dashboard types will include ArcGIS Silverlight API Map and a basic dashboard (non-spatial, blank or image background).

EQuIS Live is an optional extension to EQuIS, supporting Data logger/sensor data including:

- Sensor data dashboards
- Data structures optimized for high volume/high frequency data
- Collaboration with multiple data logger hardware vendors

EQuIS Alive adds support for ecology data such as:

- Vegetation
- Biology
- Soil
- Habitat

EQuIS Live and Alive will be optional, additional modules in EQuIS, extending the EQuIS Schema. Additional EDD formats for EDP will be developed for each additional module, and additional reports and graphics will be delivered in Professional and Enterprise EZView.

EarthSoft's EQuIS is the most widely used environmental data management software system in the world. For more information, visit www.earthsoft.com or email info@earthsoft.com.
