EnviroInsite

Advanced data visualization

# Groundwater visualization on every desktop

Intuitive interface

Scalable for any size project

EQulS EnviroInsite - EQulS database interface

EnviroInsite runs deep.

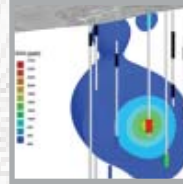

[earthsoft.com](http://earthsoft.com)

## MAPPING

Compatible with Shapefiles, DXF, DWG, JPG, TIF, and PNG. Also, serves as a OGC Web Map Service client.

## CONTOURING

Contouring made easy! Point-and-click to query, set your contour intervals, and you're done. Contour in plan, 3D, and profile.

## GEOLOGY

Explore the underworld with fence diagrams, 3D geologic models, strip logs, boring logs, and interpolated profiles.

## GEOCHEMISTRY

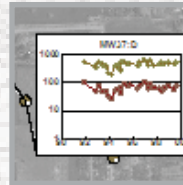

Analyze geochemistry with full-page and georeferenced Stiff diagrams, Piper diagrams, Schoeller diagrams, and scatter plots.

## FORENSICS

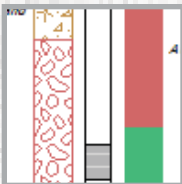

Use radial diagrams to fingerprint your contaminants to identify sources and conceptualize rate of decay.

## CHARTING

Query capability to select by analyte and location and then plot single or tiled time history charts.

## BORING LOGS

Other vendors make you buy their boring log software separately. With EnviroInsite it's all part of the package.

## TABLES

MW-14	
Depth (feet)	U (mg/L)
45.9 - 58.1	1.0
75.5 - 85.3	4.3

Georeferenced data tables with the works: list, cross-tab, transposed, depth table. Don't try this with ArcGIS.

EnviroInsite is a comprehensive software solution for exploring and communicating complex geologic and environmental conceptual models. With an intuitive user-interface, EnviroInsite is the perfect groundwater visualization software for any user. EnviroInsite is now available as part of a complete EQUIS data management system. EQUIS EnviroInsite runs deep.
