What EQuIS Offers

EQuIS Data Gathering Engine (EDGE) and Sample Planning Module (SPM) provide a workflow ensuring the delivery of correct and complete data. EQuIS integrates with real-time sampling loggers and sensors and with discrete field sampling activities. EDGE runs on tablets and laptops for data capture.

EQuIS Data Processor (EDP) and Enterprise EDP check for analytical lab electronic data deliverables. EQuIS data deliverables are used and frequently required on hundreds of thousands of environmental projects worldwide. The Data Qualification Module supports data validation and risk assessments.

EQuIS Professional and EnviroInsite let you query and export your data in a variety of ways for advanced crosstab reports, subsurface graphics, boring logs, "spider diagrams," and other common environmental project requirements.

EQuIS Enterprise web dashboards provide intuitive key performance indicators on environmental sampling data and projects. There are widgets for lab and consultant data deliverable workflows, checks for data quality, and web postings using Esri ArcGIS Server and other GIS tools.

What EQuIS End Users Are Saying

“EarthSoft products are absolutely the best tools for managing environmental data at a project, department, or company-wide level. Mitch and his team provide some of the best service I’ve ever experienced. They are flexible, knowledgeable, and honest. I highly recommend the company and their products.” – Rob Smith, Data Manager, GeoEngineers

Microsoft Azure is an open and flexible cloud platform that enables you to quickly build, deploy, scale, and manage applications across a global network of Microsoft data centers. You can build applications using multiple languages, tools, and frameworks.

**KEY USE CASES**

**WEB APPLICATIONS**
Build anything from lightweight websites to multi-tier cloud services that scale up as your traffic grows.

**CLOUD STORAGE**
Rely on geo-redundant cloud storage for backup, archiving, and disaster recovery.

**BIG DATA & HPC**
Get actionable insights from your data by taking advantage of a fully compatible enterprise-ready Hadoop service.

**MOBILE**
Accelerate your mobile app development by using a backend hosted on Microsoft Azure. Scale instantly as your install base grows.

**MEDIA**
Create, manage, and distribute media in the cloud – everything from encoding to content protection to streaming and analytics support.

**FLEXIBLE APPLICATION MODEL**
Microsoft Azure provides a rich set of application services, including SDKs, caching, messaging, and identity. You can write applications in .NET, PHP, Java, node.js, Python, Ruby, or using open REST protocols. This is all part of Microsoft’s promise to let you build using any language, tool, or framework.

**ALWAYS ON, ALWAYS HERE**
Build resilient applications with automatic operating system and service updating, built-in network load balancing, and geo-redundant storage. Microsoft Azure also proudly delivers a 99.95% monthly SLA. You can rely on decades of experience in data center operations and trust that everything Microsoft Azure offers is backed by industry certifications for security and compliance.

**DATA CENTER WITHOUT BOUNDARIES**
Microsoft Azure makes it easy for you to integrate your on-premises IT environment with the public cloud. Migrate your virtual machines to Microsoft Azure without the need to convert them to a different format. Use the robust messaging and networking capabilities in Microsoft Azure to deliver hybrid solutions, and then manage your hybrid applications from a single console with Microsoft System Center.

**GLOBAL REACH**
With data centers around the globe, a massive investment in data center innovation, and a worldwide Content Delivery Network, you can build applications that provide the best experience for users, wherever they are.
