

EQUS™ Link

A Powerful EQUS Data Migration Tool

EQUS Link is an advanced tool for migrating legacy or historical data into EQUS. Use EQUS Link with large data sets or with multiple files from a common source. EQUS Link can migrate data from a wide variety of input source files to standard EQUS electronic data deliverables (EDDs).

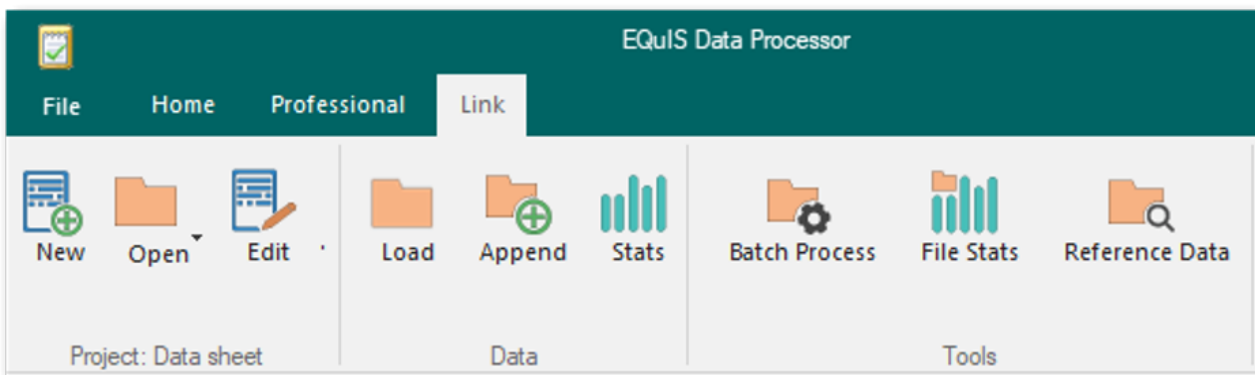

EQUS Schemas

Supported Data Source Types

Microsoft Excel, Microsoft Access, CSV, TXT, gINT, AGS4, Universal Data Link (UDL), EQUS Collect data, and custom sources.

EQUS Data Processor (EDP) Integration

EQUS Link is available in EDP with the EQUS Professional Premier Data license libraries. Check EDDs created with EQUS Link directly in EDP and enforce EDD formatting and valid values, and then import EDDs into EQUS.

Own the workflow, make better decisions.

EQUS Link Features and Benefits

- Build reusable data migration templates.
- Translate data from a variety of data sources to EQUS EDD formats for high quality data migration.
- Create EQUS EDDs by filtering data based on specified rules and conditions.
- Use batch processing to migrate many source data files with the same data structure.
- Construct and insert mathematical formulas using 70+ functions.
- Check EDDs directly in EDP.
- Generate field counts and data file values with statistical tools.
- Load external data sources as reference tables for specific data migrations.
